

Henoch - Schonlein Purpura Cured! (Case study)

Initial consultation (4/16/2002)

History:

Daisy Black, an eight year old girl, had been diagnosed with Henoch - Schonlein Purpura disease. On 3/27/2002 a seven inch section of her small intestine had been surgically removed due to an intussusception and gangrene. On 4/16/2002 she came to Overman's Healthy Choices, Inc. complaining of abdominal pain, vomiting, vasculitis, arthritis, hemorrhaging of the surgery site and kidney damage.

Consultation by applied kinesiology:

The HSP virus was found in her thymus gland, veins, capillaries, stomach, small intestine, both kidneys and the reticulo endothelium of her joints. Cell damage was measured by muscle testing to be 4.3% in her thymus gland, 3.4% in her veins, 5.1% in her capillaries, 2.8% in her stomach, 2.1% in her small intestine, 2.1% in her kidneys and 2.1% in the reticulo endothelium of her joints.

Recommended treatment:

- She had an initial zapping session of five minutes with a **Dualzap** unit, followed by three minutes a day until well.
- She took **Virex**, one teaspoon three times a day, to kill the virus in the intestinal tract where the zapper current cannot reach.
- **Supimune**, one-half teaspoon three times a day, to build immunity.
- **Stomach Build**, one-half teaspoon three times a day, to repair stomach damage.
- **KB-C**, one capsule three times a day, to repair kidney damage. (**Kidney Repair** could have been used instead of **KB-C**.)
- **Reticulo**, one-half teaspoon three times a day, to repair the reticulo endothelium.

Follow up consultation (5/29/2002)

Client report:

- Her general health was improving including her stomach, joints and kidneys.
- She reported getting intestinal cramps after eating carrots or tomatoes.
- She was having trouble taking **Virex**.
- Over the course of her illness she had lost 30% of her weight but had started to gain some weight back.

Consultation by muscle testing:

- She weighed 51 pounds.
- Her thymus gland, stomach and small intestine damage was almost healed.
- Her hemoglobin was low.
- Capillary blood flow in her stomach was only 90% of normal due to clogged capillaries.
- Capillary blood flow to her small intestine was 92% of normal and to her kidneys only 89%.
- Kidney damage remained at 2.1%.
- The HSP virus was still present.

Recommended treatment:

- Continued daily three minute sessions with a **Dualzap** unit.

- Replaced **Virex** with **BVY** which is easier for a child to take orally.
- Vitamin B12, one tablet two times a day, was given to improve hemoglobin levels. (**B12-Food** could have been used instead).
- **CAP**, one-half teaspoon twice a day, was used to unclog the capillaries and restore circulation.
- KB-C, one capsule three times a day, was continued to repair kidney tissue. (**Kidney Repair** could have been used instead.)

Follow up consultation (11/07/2002)

Client report:

- She still had some intestinal discomfort and poor kidney function.

The client's grandparents wanted to know:

- The extent of kidney damage.
- The percent of kidney function.
- Whether the HSP virus was still present.
- They had heard that we had developed a new product to kill viruses and wondered if it would help.

Consultation by muscle testing:

- Capillary blood flow was normal in all the previously determined problematic areas.
- Hemoglobin levels were normal.
- A 0.3 square inch adhesion was found in her small intestine.
- Her kidney cell damage was radically increased to 37% indicating that viral activity was primarily in the kidney tissue.
- Her kidney function was at 92% of normal.
- The HSP virus was detected and 51 individuals were counted outside the cells.
- Dr. Overman cannot count anything inside the cells by muscle testing but he had recently learned that he could count cells that had invaders inside them. He counted 4,321 cells containing viruses.
- Her thymus gland was affected having only 91% active cells.

Recommended treatment:

- **Adhes**, one-half teaspoon twice a day, was given to unstick the small intestine adhesions.
- A new product which encourages the production of new kidney cells, **Nefron**, was given at one-half teaspoon three times a day.
- At 12:00 noon one-half teaspoon of **Puricell** (a new product which breaks cells containing invaders) was given and Daisy was sent to eat lunch. At 2:30 PM she returned. The free virus count had dropped from 51 to 0. The cells containing viruses had dropped from 4321 to 742. She was instructed to take one-half teaspoon of **Puricell** once a week and continue with daily three minute sessions with a **Dualzap** and one-half teaspoon three times a day of **BVY**.
- She was given a new product that promotes the formation of new cells in the thymus gland and most endocrine glands called **NuGland**, one-half teaspoon three times a day to restore the thymus gland.

Follow up consultation (12/13/2002)

Client report:

Daisy's grandparents brought her, complaining that she was passing blood in her urine. Since the last visit, her medical doctor had put her on chemotherapy to try to stop the progression of kidney damage. The bleeding had resulted.

Consultation by muscle testing:

- The chemo had further damaged her thymus gland knocking Tcell count down to 51% of normal.
- Her hemoglobin was low and her total white blood cells were down to 42% of normal.
- Although passing blood, her kidneys had gained some.
- Now kidney damage was down from 37% to 31%.
- Her energy levels were low with her adenosine triphosphate levels at only 91% of normal.
- No viruses or cells with viruses inside them were found.
- The adhesions in the small intestine were healed.

Daisy's grandparents were very upset with the damage caused by the chemotherapy.

Recommended treatment:

- Daisy's grandparents were very upset with the damage caused by the chemo and they determined to talk her parents into discontinuing chemo treatment.
- **NuGland** was increased to one and one-half teaspoons three times a day which was the maximum beneficial dose to rebuild the thymus gland and raise the level of white blood cells.
- **Enzyme Activated Chlorella**, one-half teaspoon three times a day, was given to restore hemoglobin levels.
- **Nefron** was continued to repair the kidneys, one-half teaspoon three times a day.
- **Recharge**, one-half teaspoon three times a day, was recommended to normalize Adenosine triphosphate levels and restore energy.

Follow up consultation (12/24/2002)

Client report:

Daisy had developed a cough the previous Sunday night with fever, poor sleep and brown urine. Her parents were frightened.

Consultation by muscle testing:

- The bacteria *Proteus mirabilis* was found in her bronchial tubes and kidneys.
- Her Tcells were up from 51% to 96%.
- Her hemoglobin was normal.
- Her kidney damage had decreased to 18%.
- ATP levels were normal.
- No blood was found in her urine.
- She had been off of chemo for one week.

Recommended treatment:

- Continued **NuGland** at one-half teaspoon three times a day.
- Continued **Enzyme Activated Chlorella** at one-half teaspoon twice a day.
- Continued **Nefron** at one-half teaspoon three times a day.
- Continued **Recharge** at one-half teaspoon once a day.
- Continued daily three minute **Dualzap** sessions and took **Bactex**, one teaspoon three times a day, to kill the bacteria and prevent further infection.

Daisy had grown two inches in one month,
whereas, she had not grown any in the
previous eight months.

Follow up consultation (1/23/2003)

Client report:

- Daisy had grown two inches in one month, whereas, she had not grown any in the previous eight months.
- She had gained three to five pounds.
- She now feels well most of the time.

Consultation by muscle testing:

- Her Tcell count was up to 100% of normal as was also her hemoglobin, white blood cells and ATP levels.
- Her kidney damage had decreased to 6.1%.

Recommended treatment:

- Continued **Nefron** at one-half teaspoon three times a day.
- Continued **Recharge** at one-half teaspoon once a day.
- Continued daily three minute **Dualzap** sessions.
- Took a broad spectrum prophylactic herbal combination that kills most bacteria, viruses, yeasts and protozoa called **Protek** at one teaspoon three times a day.

Follow up consultation (3/25/2003)

Client Report:

- Daisy reported feeling good but had a slight cough.
- She had started taking a supplement called Sea Silver and noticed a slight elevation in blood pressure to 128/93.
- She was very happy and active.

Consultation by muscle testing:

- It was confirmed that Sea Silver had made her blood pressure elevate.
- She had slight bronchial damage from her previous infection.
- Kidney damage was now down to 0.6%.
- Everything else was normal.

Recommended treatment:

- She stopped Sea Silver and minimized salt intake to normalize blood pressure.
 - Took **Cart**, one-half teaspoon twice a day, to repair bronchial tube cartilage damage.
- Continued prophylactic use of the **Dualzap** and **Protek** at one teaspoon twice a day.

Follow up report (August, 2009)

Daisy's grandparents report that she is perfectly healthy. They attribute praise to God that Dr. Overman's protocol saved her life and restored her health.
